ABOUT PCT

Precision Cutting Tools. (PCT) was founded in 1963 and ever since has specialized in the production of high-quality and high performance cutting tools. Today, with over fifty years of experience, PCT is a leading cutting tool manufacturer that distributes its products all across North America and Europe. We base our company's success on our long-standing commitment to satisfy our customer's needs, by utilizing the finest raw materials, introducing innovative cutting tools and providing excellent customers' service. What makes us different from other manufacturers is our pledge to offer the best turnaround times for specials in the industry. While many of our competitors deliver in weeks and months, we deliver it in days.

Precision Cutting Tools was proud to announce in May 2018 that it had become a member of the IMC Group. The partnership between the Sheth Family and the IMC Group continues to operate as an independent brand with our own products and distributor network. PCT moved its operations in late 2020 to a 60,000 square foot facility in La Palma, CA. The new facility allows us to expand our capacity and continue to dedicate ourselves to our core competency of having the best in industry delivery on specials, high performance endmills and long drills.

IN-HOUSE PVD COATING

In 2004, we integrated our own in-house coating facility, to complement our cutting tools and simplify our customers' shopping experience.

MISSION

Our mission is to satisfy and fulfill the needs of our customers by offering a high performance, high quality tool at a fair price, with the quickest turnaround time in the industry. Through increasing capacity and capabilities by investing in machinery and people, we continue to grow sales while maintaining our delivery times.

VISION

We want the PCT brand to be known for having the quality and performance that you expect from large tool manufacturers, but offer our customers the turnaround time and customer service you expect from a family run company.

MATERIAL CODE

P	1	Low-Carbon Steels - <300 Hb 1018, A36, 12L14
	2	Medium & High Carbon Steels - <300 Hb 1000-1200 Series
	3	Alloy Tool Steels - <300Hb 4130, 4140, 4340, 8620
	4	Alloy Tool Steels - >300Hb A2, P20, S7, H13
	5	Ferritic, Martensitic & PH Stainless Steels - 400's, 15-5, 17-4, Custom 400's
	6	Ferritic, Martensitic & PH Stainless Steels - 400's, pH Types (15-5, 13-8, 17-4) (36-48 HRc)
M	1	Austenitic Stainless Steels - Inox, 200 Series, 300 Series and 304L
	2	Austenitic Stainless Steels & Cast Stainless Steels - 310, 314, 316
	3	Duplex Steels (Austenitic & Ferritic) - 323, 329, F55, 2205
K	1	Gray Cast Iron
	2	Ductile Iron - 60-40-18, 65-45-12 <320 Hb
	3	Ductile Iron - 32510, 35018 >300 Hb

NEW

EDGE CUT™

EdgeCut is a NEW manufacturing process for cutting tools, implemented to provide our customers with superior cutter performance. The EdgeCut process consists of adding a controlled radius on the cutting tool's edge (also known as honing), to create an even and stronger cutting edge. EdgeCut has proven to be a key factor in the success of our cutting tools. Through our extensive testing, cutters with EdgeCut have outperformed tools without any edge preparation.

How does

EDGE CUT™

Improve Performance?

An even and stronger cutting edge...

- Reduces the risk of edge chipping and cracking, resulting in a longer tool life.
- Increases coating adhesion, providing excellent chip evacuation and wear resistance.
- Dissipates stress and force focus, allowing for increased speeds and feeds.
- Provides chatter-free machining, leaving a smooth surface finish on the part.

Before

After

Benefits of

EDGE CUT™

Longer Tool Life

Increased Coating Adhesion

Higher Speeds & Feeds

Improved Surface Finish on the part

Stronger Cutting Edge

Enhanced Chip Evacuation

Reduced Cycle Time

Stronger Edge. Faster Speeds. Longer Life.

CARBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

High Performance Triple Margin Drill Coolant Thru
Ideal for Aluminum and Non-Ferrous Materials
3xD-50xD

SCAN FOR SPEEDS & FEEDS

CARBIDE	3xD to 50xD	135°	15°		Zirco Plus®
---------	-------------	------	-----	--	-------------

ZircoPlus® provides increased corrosion and abrasion resistance, for maximized machining.

N Refer to page 4

Coolant Holes - Cool the cutting edge and improve chip evacuation.

Mirror Polished Flutes - on 12xD-50xD polish process adds lubricity for better chip evacuation on deep hole drilling.

Triple-Margin Design - Ideal for improving surface finish and increasing stability.

No Pecking Required

16xD – 30xD must utilize a pilot hole drill. Refer to page 77. 40xD & 50xD should utilize a 20xD intermediary drill along with pilot drill. Refer to page 21

Design – Long spiral-fluted, triple-margin, right-hand cut and internal coolant.
Ideal for – Aluminum and non-ferrous materials

ZircoPlus® provides increased corrosion and abrasion resistance, for maximized machining.

Refer to page 4

CARBIDE DRILLS

Design – Long spiral-fluted, triple-margin, right-hand cut and internal coolant.
Ideal for – Aluminum and non-ferrous materials

Zircro Plus® provides increased corrosion and abrasion resistance, for maximized machining.

N Refer to page 4

■ This drill should utilize a pilot hole drill. (Refer to page 77)

SCAN FOR SPEEDS & FEEDS

Design – Long spiral-fluted, triple-margin, right-hand cut and internal coolant.
Ideal for – Aluminum and non-ferrous materials

ZircroPlus® provides increased corrosion and abrasion resistance, for maximized machining.

Refer to page 4

This drill must utilize a pilot hole drill. (Refer to page 77)

CARBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

Design – Long spiral-fluted, triple-margin, right-hand cut and internal coolant.
Ideal for – Aluminum and non-ferrous materials

ZircO Plus® provides increased corrosion and abrasion resistance, for maximized machining.

N Refer to page 4

■ This drill must utilize a pilot hole drill. (Refer to page 77)

CARBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

**High Performance
Single Margin Drill
Non Coolant Thru
Ideal for Aluminum &
Cast Materials
3xD-5xD**

SCAN FOR SPEEDS & FEEDS

Design – Spiral-fluted, right-hand cut, with external coolant and a cylindrical shank.

130° Point Geometry
Self Centering - Ideal for faster drilling and high feed rates.

Single-Margin Design -
For reduced friction.

ZircoPlus® provides increased corrosion and abrasion resistance, for maximized machining.

K N Refer to page 4

No Pecking Required

CARBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

**High Performance
Single Margin
Coolant Thru Drill**
Ideal for Aluminum &
Cast Materials
3xD-5xD

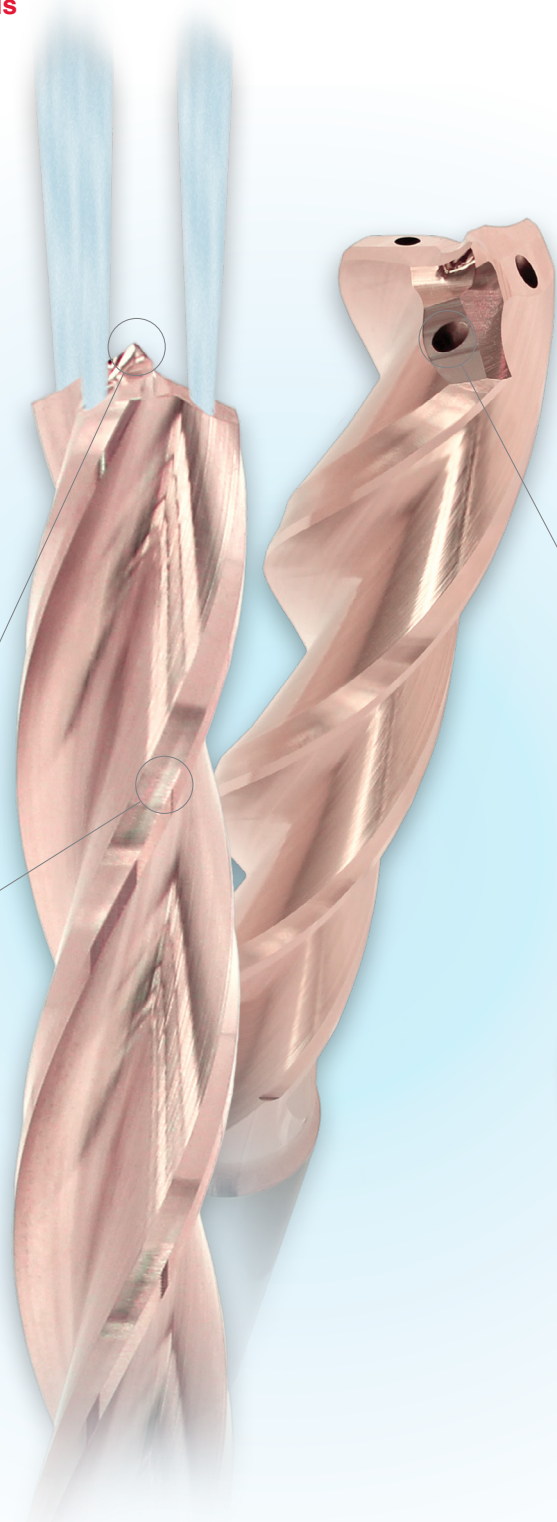

SCAN FOR SPEEDS & FEEDS

CARBIDE	3xD to 5xD	130°	30°		Zirco Plus®
---------	------------------	------	-----	--	----------------

ZircoPlus® provides increased corrosion and abrasion resistance, for maximized machining.

K N Refer to page 4

**130° Point Geometry
Self Centering** - Ideal for faster drilling and high feed rates.

Single-Margin Design - For reduced friction..

Coolant Holes - Cool the cutting edge and improve chip evacuation.

No Pecking Required

Design – Spiral-fluted, right-hand cut, with internal coolant
Ideal for – Aluminum, cast materials and non ferrous materials

ZircroPlus® provides increased corrosion and abrasion resistance, for maximized machining.

Refer to page 4

CARBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

High Performance Triple Margin Coolant Thru Drill
Ideal for Gray Cast Iron and Ductile Iron
3xD-30xD

SCAN FOR SPEEDS & FEEDS

CARBIDE	3xD to 30xD	135°	15°		Varianta® Supral
---------	-------------	------	-----	--	-----------------------------

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

K Refer to page 4

Coolant Holes - Cool the cutting edge and improve chip evacuation.

135° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Mirror Polished Flutes - on 12xD-30xD polish process adds lubricity for better chip evacuation on deep hole drilling.

Triple-Margin Design - Ideal for improving surface finish and increasing stability.

45° Standard Chamfer - Cutting edge protection and longer tool life.

Design – Long spiral-fluted, 45° corner chamfer, triple-margin, right-hand cut and internal coolant.

Ideal for – Gray cast iron and ductile iron

K Refer to page 4

No Pecking Required

3xD

5xD

8xD

12xD

16xD

20xD

25xD

30xD

16xD – 30xD must utilize a pilot hole drill. Refer to page 77

Design – Long spiral-fluted, 45° corner chamfer, triple-margin, right-hand cut and internal coolant.

Ideal for – Gray cast iron and ductile iron

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

CARRIBIDE DRILLS

SCAN FOR SPEEDS & FEEDS

Single Margin Drill
Non Coolant Thru
Ideal for General
Purpose Drilling
3xD-5xD

SCAN FOR SPEEDS & FEEDS

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

PMS Refer to page 4

135° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Single-Margin Design - For reduced friction.

No Pecking Required

Design – Spiral-fluted, right-hand cut, with external coolant.
Ideal for – General Purpose Drilling

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

P M S Refer to page 4

SCAN FOR SPEEDS & FEEDS

**High Performance
Double Margin
Coolant Thru Drill
3xD-12xD**
Ideal for – Steels,
Stainless, & Titanium

SCAN FOR SPEEDS & FEEDS

CARBIDE	3xD to 12xD	140°	30°		Varianta® Supral
---------	-------------	------	-----	--	------------------

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

Refer to page 4

140° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Coolant Holes - Cool the cutting edge and improve chip evacuation.

Mirror Polished Flutes - on 12xD polish process adds lubricity for better chip evacuation on deep hole drilling.

Double Margin Design - For improved drilling stability and smooth surface finish.

No Pecking Required

Design – Spiral fluted, right-hand cut, with internal coolant and a cylindrical shank.

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

Refer to page 4

SCAN FOR SPEEDS & FEEDS

**High Performance
Double Margin
Coolant Thru Drill**
Ideal for Steels,
Stainless,
and Titanium
16xD-50xD

SCAN FOR SPEEDS & FEEDS

CARBIDE	16xD to 50xD	135°	30°		Varianta® Supral
---------	--------------------	------	-----	--	---------------------

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

PMS Refer to page 4

135° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Double-Margin Design - For improved drilling stability and smooth surface finish.

Coolant Holes - Cool the cutting edge and improve chip evacuation.

Mirror Polished Flutes - on 16xD-50xD polish process adds lubricity for better chip evacuation on deep hole drilling.

Design – Long spiral-fluted, right-hand cut, double-margin and internal coolant.

PMS Refer to page 4

No Pecking Required

16xD

20xD

25xD

30xD

40xD

16xD – 30xD should utilize a pilot hole drill. Refer to page 77. 40xD & 50xD should utilize a 20xD intermediary drill along with pilot drill. Refer to page 58.

Design – Long spiral-fluted, right-hand cut, double-margin and internal coolant.

Varianta[®] Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

PMS Refer to page 4

■ 16xD–30xD must utilize a pilot hole drill. (Refer to page 77)

CARBIDE DRILLS

Design – Long spiral-fluted, right-hand cut, double-margin and internal coolant.

Varianta® Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

PMS Refer to page 4

40xD & 50xD should utilize a 20xD intermediary drill along with pilot drill. (Refer to page 58 and 77)

SCAN FOR SPEEDS & FEEDS

**High Performance
Double Margin
Coolant Thru Drill**
Ideal for Nickel Based
Alloys
3xD-30xD

CARBIDE	3xD to 30xD	135°	15°		Sistral®
---------	-------------------	------	-----	--	----------

Sistral® Has a nanostructure composition that provides both high heat and oxidation resistance. Ideal for dry and high-speed cutting applications of materials.

Refer to page 4

SCAN FOR SPEEDS & FEEDS

Coolant Holes - Cool the cutting edge and improve chip evacuation.

135° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Mirror Polished Flutes - on 12xD-30xD polish process adds lubricity for better chip evacuation on deep hole drilling.

Double Margin Design - For improved drilling stability and smooth surface finish.

45° Standard Chamfer - Cutting edge protection and longer tool life.

Design – Long spiral fluted, 45° corner chamfer, right hand cut, double-margin and internal coolant.
Ideal for – Nickel-based alloys

S H Refer to page 4

No Pecking Required

Must utilize a pilot hole drill when using 16xD - 30xD. Refer to page 77

Design – Long spiral-fluted, 45° corner chamfer, right hand cut, double margin and internal coolant.
Ideal for – Nickel based alloys

SISTRAL® Has a nanostructure composition that provides both high heat and oxidation resistance. Ideal for dry and high-speed cutting applications of materials.

CARBIDE DRILLS

Design – Long spiral-fluted, 45° corner chamfer, right hand cut, double margin and internal coolant.

Ideal for – Nickel based alloys

Sistral® Has a nanostructure composition that provides both high heat and oxidation resistance. Ideal for dry and high-speed cutting applications of materials.

S H Refer to page 4

■ This drill must utilize a pilot hole drill. (Refer to page 77)

SCAN FOR SPEEDS & FEEDS

**High Performance
Single Margin
Coolant Thru Drill
Ideal For Hardened
Materials
3xD**

SCAN FOR SPEEDS & FEEDS

Sistral® Has a nanostructure composition that provides both high heat and oxidation resistance. Ideal for dry and high-speed cutting applications of materials.

P K H Refer to page 4

Design – Spiral-fluted, right-hand cut, with internal coolant and a cylindrical shank.

140° Point Geometry - Designed for low-cutting force and chip evacuation.

Coolant Holes - Cool the cutting edge and improve chip evacuation.

Single-Margin Design -For reduced friction with surface hole limiting heat

S-Point - Stronger point edge.

No Pecking Required

3xD

Design – Spiral-fluted, right-hand cut, with internal coolant and a cylindrical shank.
Ideal for – Hardened Materials

Sistral® Has a nanostructure composition that provides both high heat and oxidation resistance. Ideal for dry and high-speed cutting applications of materials.

P K H Refer to page 4

Manual for Pilot Drill

All deep-hole drills must utilize a pilot hole drill.

Utilize a pilot hole drill to a minimum pilot depth of 1 to 1.5 x D. The pilot drill must be .00078 inches (.02mm) bigger in diameter than the diameter of the long drill.

Introduce the long drill in the hole at a speed of 300 RPM.

Use low pressure coolant until the drill reaches full RPM

Then turn on high pressure coolant

You might need to add a G4 for a couple of seconds for the coolant to reach full pressure.

After entering the hole, increase to the recommended feedrate.

Before taking the drill out of the hole, reduce the speed back to 300 RPM and withdraw the long drill.

Use the same feedrate to retract to start point and Reduce the coolant pressure. Do not use a rapid move.

Coolant Fed:

Pilot Coolant Thru Drill
Recommended for Drills 16xD and Above.

PILOT DRILL

Varianta[®] Supral

Varianta[®] Supral Provides a low coefficient of friction, reducing tool wear and resulting in a longer tool life.

P M K N S Material Code: Refer to Page 4

150° Point Geometry - Split-point geometry for superior drill penetration and accuracy.

Single-Margin Design - For reduced friction..

Coolant Holes - Cool the cutting edge and improve chip evacuation.

The pilot drill is .00078 in (.02mm) larger in diameter than the diameter of the long drill
 Example: If diameter is shown as 3.00mm we add an additional .02mm in diameter to make it a pilot drill.
 (3.00mm + .02mm = 3.02mm)

BEFORE

AFTER

FIRM HOLD

The **Firm Hold Shank** can be applied to any of our standard endmills or special tools. The shank is diamond blasted, to create an overall stronger grip and maximize tool performance.

BENEFITS

- Reduces Tool Pull-Out
- Creates Greater Torsional Resistance
- Increase Productivity With Higher-Feed Rates

224 SERIES

Advanced geometry; wiper flat, E-cut polish and controlled land, will provide better chip evacuation and a superior part finish.

ALUMINUM AND NON-FERROUS ALLOYS ENDMILLS

N Material Code: Refer to Page 4

Hpm+ in 2 flute and 3 flute are engineered specifically for applications reaching 15,000 to 30,000 rpm. The design features a special flute grind that leaves the cutter well-balanced and mirror polish on the flutes for better chip evacuation. Shrink fit style tooling only.

Exxtral Carbon® 3-4 times more tool life compared to ZrN.

SCAN FOR SPEEDS & FEEDS

577 SERIES

HEM / dynamic milling and finishing.
Increased cutter stability and
reduced chatter. Has perfect balance
of hardness and toughness.

Vulcan® Coating Nanolayered
structure provides exceptional
wear resistance and lubricity

P M K S H Material Code: Refer to Page 4

Available Upon Request:
Flats, Firm Hold Shank

TITANIUM AND INCONEL

ENDMILLS

NEW
FOR TITANIUM & INCONEL

Ti7
SERIES

Proprietary PCT technology combined with our X60 carbide grade, offers maximum protection against edge chipping which ensures consistent performance in high efficiency milling.

Cut-Tron® Coating offers excellent heat and abrasive wear resistance.

S Material Code: Refer to Page 4
Available Upon Request:
Flats, Firm Hold Shank

 MM = IN X 25.4

HAIMER USA and Precision Cutting Tools Form Safe-Lock™ Partnership

Precision Cutting Tools (PCT), a U.S. carbide round tool manufacturer, and HAIMER USA, a market leader in tool holding technology, have recently signed a U.S. licensing agreement for HAIMER's patented Safe-Lock™ anti-pullout system.

Ever since their beginning in 1963, PCT has specialized in the production of high performance and high quality cutting tools. They pride themselves on providing excellent customer service and by introducing innovative cutting tools. PCT and HAIMER have very similar company morals, which makes it easy to work together. "It is my pleasure to welcome PCT as an official U.S. Safe-Lock™ Licensee," stated Brendt Holden, President of HAIMER USA. "The Safe-Lock™ system was specifically designed for aggressive machining applications and high speeds, and many of PCT's customers are already utilizing the Safe-Lock™ technology. It is for this reason that I believe that the Safe-Lock™ system will be well received by PCT customers across the U.S."

At PCT, customers were realizing that increased productivity would reduce overall costs. With the use of Safe-Lock™, customers feel comfort knowing that their tools are secure and will not pull out and potentially scrap a part. "At PCT, we consider ourselves a solutions provider for the end user," CEO of PCT Nikhil Sheth said. "Partnering with HAIMER has allowed us to provide this sort of assurance against tool slippage."

Since its creation, the Safe-Lock™ system has continued to grow rapidly in the U.S. market across all industrial sectors. The success of the system has largely been fueled by its popularity as more and more manufacturers recognize increased productivity due to the pull out protection Safe-Lock™ provides. Safe-Lock™, which emerged from the requirements of heavy-duty machining, initially made a name for itself in the aerospace and energy industries. However, cost and time savings are not solely restricted to typical aerospace applications and have also been found in every-day milling applications. In particular, the increase in customers utilizing the modern high efficiency dynamic milling strategies available from the CAM software companies, have found Safe-Lock™ to be an absolute necessity.

To learn more about Safe-Lock™, visit haimer-usa.com or call 630-833-1500.

IN-HOUSE COATING

PCT offers a variety of coatings for all your cutting tools through its in-house coating facility. Our experts will help you choose the proper coating for your specific needs and will have your tools coated within a 24-48 hr. time frame.

PVD Coatings	TiN®	Z-Power®	ZircoPlus®	TiCN	Cut-tron
Coating Material	Titanium Nitride	Zirconium Nitride	Zirconium Carbo-Nitride	Titanium Carbo-Nitride	Aluminum Chromium-X Nitride
	TiN	ZrN	ZrCN	TiCN (ML)	AlCrO
Micro-hardness HV 0.05	2300	2800	3100	3500	3300
Friction Coefficient Against Steel (Dry)	0.6	0.5	0.5	0.2	0,4
Coating Thickness* (µm)	2-4	1-4	1-4	2-4	2-4
Thermal Threshold	500°C 900°F	600°C 1100°F	600°C 1100°F	400°C 750°F	600°C 1100°F
Color of the Coating	Gold	Pale Gold	Pale Yellow, Rose	Blue Gray	Granite Gray
Key characteristics	Standard, all-purpose coating, biocompatible	Good wear and corrosion resistance, biocompatible	Low friction high corrosion resistance, biocompatible	High hardness, good wear resistance, enhanced toughness	High-performance cutting, dry and hard cutting
Primary Applications	For use on cutting tools that are used for machining Iron(Fe) alloys and steels Low-chemical reactivity against iron and steel Metal forming Plastic molding	Ideal for machining aluminum, brass, nickel, fiberglass, nylon and most polymer materials Corrosion and adhesion resistant properties Forming and punching - reduced cold re-welding Medical applications - biocompatible & corrosion resistant	For use on carbide cutting tools, HSS and other materials below 450°C/842°F Ideal for Aluminum Alloys with high Silicon(Si) content Averts light metals from welding together Excellent for non-ferrous applications	Applied to HSS cutting tools for high speed machining of steels Ideal for interrupted cutting operations of steels Helps maintain the sharp edges and corners on the cutting tool Excellent for metal forming (stainless steel)	Excellent heat and abrasive wear resistance. Its unique hot hardness and oxidation resistance makes it a perfect choice whenever the cutting conditions are running dry and hot. Based on the dedicated micro alloyed composition and structure, CutTron-AlCrO outperforms standard AlCrN-coatings.

PROPERTIES AND APPLICATIONS OF OUR PVD COATINGS

Exxtral Plus®	Exxtral Silver®	Exxtral Carbon®	Exxtral Black®	Sistral®	WC/C	Vulcan®	Varianta® Supral	CrN CrCN
Aluminum Titanium Nitride	Aluminum Titanium Chromium Nitride	Tetrahedral Amorphous Carbon (Diamond)	Aluminum Chromium Nitride	Aluminum Titanium Nitride (w/additions)	Tungsten Carbide-Carbon	Titanium Aluminum Carbo-Nitride	Titanium Aluminium Carbo-Nitride	Chromium Nitride Carbo-Nitride
AlTiN (stacked)	AlTiCrN	Ta-C	AlCrN	AlTiN (nanostructured)	a-C : Me	TiAlCN	TiAlCN (ML)	CrN CrCN
3300	3300	5500-6000	3200	3500	1000-2200	3500	3500	2000 2300
0.7	0.4	0.1	0.45	0.7	0.2-0.25	0.2	0.7 <0.5	0.3-0.4 0.2-0.3
1-3	2-4	0.5-1.5	2-5	1-3	1-2	2-4	2-4	2-6
800°C 1470°F	800°C 1470°F	500°C 900°F	1100°C 2012°F	900°C 1650°F	400°C 750°F	800°C 1470°F	800°C 1470°F	600°C 1100°F
Anthracite, Dark Gray	Silver	Rainbow Gray	Slate Gray	Anthracite (Black)	Dark Gray	Copper, Old Rose	Anthracite (Black)	Silver-Gray
High hardness very good oxidation resistance	High hardness and oxidation resistance	High thermal stability, excellent tribological properties, and a long cutting life	High heat hardness, wear resistance and oxidation resistance	Extreme wear and oxidation resistance at high temperatures	High lubricity, low tendency for adhesive wear	Low friction, high oxidation resistance	High hardness, very good oxidation resistance low friction	Low stress/ good adhesion, high toughness and corrosion resistance
Machining of hardened steel work	For use on carbide cutting tools for machining titanium, inconel, stainless steels and cast iron	Ideal for machining of Aluminum and non-ferrous materials.	Intended for use on high temperature applications	Best choice for cutting under extreme conditions (hard, abrasive materials, high speed, dry cutting)	Precision components	Coating for a wide range of carbide, cermet and HSS and other steels, Machining under dry as well as wet conditions	Coating for a wide range of carbide, cermet and high speed steel tooling	Machining copper and other non-ferrous materials
For use on carbide end mills	Machining abrasive and gummy materials	Can also be used on plastic and rubber	Increased adhesion and advanced oxidation resistance	Machining of hardened steel (>54 HRC)	Punching & forming, minimal lubrication or dry	Machining under dry as well as wet conditions	Machining of cast iron and nickel-based high temperature alloys	Metal forming
High speed operations, semi-dry or dry machining	CrN surface reduces the cold welding tendency	Extremely extends the life of the cutting tool, and provides a sharper cutting edge.	Excellent for cutting steels and high speeds, dry or semi-dry machining	Inconel machining	Plastic injection & molding	Excellent for drilling in steel	High speed operations, semi-dry or dry machining	Plastic molding (improved demolding)
Metal cutting tasks where other coatings reach their limits of thermal and mechanical load				Helps maintain high cutting forces and tool life	Moving parts, dry	Drawing, stamping, punching, forming tools for processing of high and low alloy steel	Excellent for drilling operations in steel (up to 45 HRC)	Aluminum and magnesium die casting

*Depends on size of tools; for micro tools thinner coatings.
